

Quad-Tray® Ultimate™

NEW!

Posterior

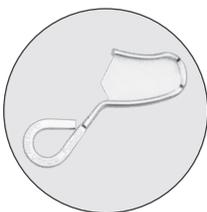

The Ultimate in Impression Accuracy

The **Quad-Tray® Ultimate™ Posterior** is dentistry's most advanced dual-arch metal impression tray. Unlike flexible plastic impression trays, the new Quad-Tray Ultimate Posterior tray will not distort to ensure the ultimate in impression accuracy. Incorporate Quad-Tray Ultimate into your practice and reduce your incidence of impression distortion, costly remakes, and disruption to your office routine.

Ultra-Rigid Aluminum

Fabricated with lightweight, ultra-rigid aluminum, the Quad-Tray Ultimate Posterior is 25% more rigid than its predecessor ensuring distortion-free impressions.

Wide Arch

Accommodating virtually all arch shapes, the wide arch design prevents burn through of the teeth, a common problem with most narrow impression trays.

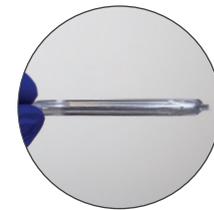

Ultimate Low Profile Distal Bar

At only 2.6mm thick, the low profile distal bar provides the ultimate in prevention of impingement at the retro molar pad. The Quad-Tray Ultimate Posterior tray's distal ends are rounded to provide the ideal fit and comfort.

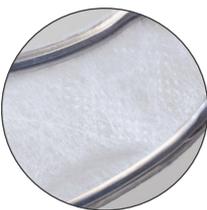

Low Sidewalls

This design feature prevents palatal impingement and axial roll of the tray wall, a common cause of distortion.

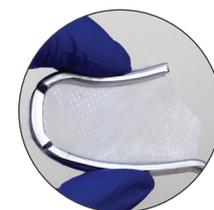

Ultra-Lock™ Mesh

At only 0.07mm thick, the Ultra-Lock mesh allows for secure fusion of the preparation and opposing impression, preventing the impression material from separating from the tray during removal.

Customizable

Adjust the tray's arch width to suit virtually any patient's arch size.

Recyclable

The Quad-Tray Ultimate Posterior's aluminum construction is 100% recyclable — no more plastic trays ending up in the landfill.
